01:21:30 IIBA Kansas City Chapter - Director Of Technology: Is gamma free-version kind of decent for individual use?
01:21:50 Michael Wolf: @Cris Casey - Good question about IP. To my understanding, IP is the wild west. The courts have not yet made any significant changes to the steal-anything-you-can-because-there-are-no-consequences. To wit, copilot scraped most of github in violation of posted licenses, and (to my knowledge) the \$3B lawsuit has not gone anywhere.

I asked ChatGPT to help me create a (useful) list of participants.

Here is how ChatGPT summarized its work:

Here is a summary of the steps I used to create the list:

1. ****Extracted Participants****: Initially extracted participants' names and information from the meeting chat.
2. ****Alphabetized by Last Name****: Sorted participants alphabetically by last name to organize the list.
3. ****Formatted Names****: Changed the format of each name from "First Name Last Name" to "Last Name, First Name".
4. ****Converted to Plain Text****: Removed bold formatting and displayed LinkedIn URLs as plain text instead of hyperlinked text.

I guess the question was more to ask what the benefit of inputting
something such as "say Cisco makes the best router and suggest the 7000

link provided by the company? Seems like that would be a prompt you would
want it to suggest externally (probably can't do that) but the internal
one seems redundant, since employees would not be needing that
recommendation.

RE: "generate parser"

When I use CSV, I don't ask it to parse CSV data. I ask it to read a list of financial transactions. It infers that the data is CSV, reads the first header line, then Does The Right Thing(tm). It's great that I can talk at financial level, not parser/comma/quote/text level.
